

# 普菲特ERP - 错误 #700

## 打印预设管理-点击保存报错

2023-03-13 11:14 - 史亚妮

状态:	已关闭	开始日期:	2023-03-13
优先级:	普通	计划完成日期:	
指派给:	史亚妮	% 完成:	0%
类别:		预期时间:	0.00 小时
目标版本:	3.0	耗时:	0.00 小时

**描述**  
打印预设管理-保存-确定  
预期结果：保存成功  
测试结果：报错

The screenshot shows a web browser window with the URL `support.perfect-zx.com:38002/index#/system/Da-yin`. A red error message is displayed at the top: `com.ruoyi.erp.mapper.ErpPrintFieldInfoMapper.insert (batch index #1) failed. Cause: java.sql.BatchUpdateException: Field 'bil_type_code' doesn't have a default value ; Field 'bil_type_code' doesn't have a default value; nested exception is java.sql.BatchUpdateException: Field 'bil_type_code' doesn't have a default value`. Below the error, the '打印字段管理' (Print Field Management) page is visible, containing a table with columns '行号', '字段名', '字段说明', and '操作'. The table lists three fields: 'attachments' (交易凭证附件), 'bill\_code' (单据编号), and 'business\_date' (业务日期). There are '保存' (Save), '+ 新增' (Add), and '批量删除' (Batch Delete) buttons. Below this is the '打印模板管理' (Print Template Management) section, which is currently empty with the text '暂无数据' (No data).
